PROFESSIONAL SUMMARY:

Fully graduated Computer Engineer with 4 official Cisco credentials and a proven history engineering full-stack tools and concurrent AI data pipelines. Specialize in React, Node.js, and Django backend configurations with a core focus on system infrastructure stability, REST APIs, and database integrity. Actively tracking toward AWS Solutions Architect Associate certification with immediate full-time deployment availability.

EDUCATION

Technological Institute of the Philippines (TIP) | Manila

Bachelor of Science in Computer Engineering | April 25, 2026 | GWA: 1.82

Dean's Lister: SY 2024–2025 (2nd Sem), SY 2025–2026 (1st Sem)

WORK EXPERIENCE

Twireless Inc. | Computer Engineering Intern (OJT) | Jan 2026 – Mar 2026

- **Workstation Infrastructure:** Provisioned enterprise hardware configurations, managed peripheral arrays, and deployed standardized operating systems to streamline corporate workspace onboarding workflows.
- **Technical Diagnostics:** Executed systematic root-cause analysis (RCA) on hardware and network connectivity faults, executing hardware upgrades and system maintenance to minimize operational downtime.

Shojiki Trading | Lead Web Developer (Freelance) | Aug 2024 – Sep 2025

- **Industrial Web Design:** Developed a WordPress ecosystem for an industrial firm, managing 35k+ files and SQL.
- **Optimization:** Integrated high-performance free tools, reducing client overhead by 100%.
- **Custom Logic:** Engineered custom JavaScript solutions to bridge functional gaps and ensure responsive UX.

PROJECTS

AvoSort (Industrial Optical Sorter Capstone) — Hardware-Software Lead

- **Dual-Vision & Multispectral Pipeline:** Engineered an in-series dual-camera conveyor line using an RGB webcam for high-speed tracking and a **Raspberry Pi NoIR V3** synchronized with a custom **5-color sequential LED strobing array** for internal seed health diagnosis.
- **Parallel Edge AI Optimization:** Deployed parallel, quantized **YOLOv8n + YOLOv11m** models concurrently on a Raspberry Pi 5 via **ONNX Runtime (INT8/FP16)**, tuning CPU threads to bypass GIL bottlenecks and minimize latency.
- **Mechatronic Loop & Power Grid:** Coordinated real-time serial tracking to an Arduino Mega for stepper/servo gate actuation; built a 24V isolated power network using a **multi-channel fused buck array capped at 700mA** to eliminate EMI and thermal stress.

HARBEE & IoT Systems Portfolio

- **IoT & Solar Tracking:** Designed an autonomous harvesting system integrating solar power management and real-time network alerts over ESP32 modules.
- **Telemetry Protocols:** Built real-time prototype communication networks utilizing hardware compatibility mapping and sensor diagnostics.

WebSched Automated Platform

- **Full-Stack Automation:** Built an automatic scheduling platform using React, Vite, Node.js, and Django to manage technical timeline scheduling.

TECHNICAL SKILLS:

- **Edge AI & Data Science:** YOLO v8/v11, ONNX Runtime, Embedded Computer Vision, Model Quantization, Data Pipelines.
- **Hardware & CAD Modeling:** Autodesk Fusion 360 (3D Modeling & Assembly), Electrical Schematic Drafting, 24V PSU Management, Solar System Integration, Raspberry Pi 5, Arduino, ESP32.
- **Software & Databases:** Python, JavaScript, C++, React.js, SQL Database Management, Node.js, Django.
- **Modern Workflow & Tools:** Git, GitHub Actions, AI-assisted development tools (Cursor/Copilot), CI/CD fundamentals, manual code auditing.
- **Network Infrastructure:** Cisco CCNAv7 (Routing, Switching, Wireless), Network Defense, Endpoint Security.

SOFT SKILLS:

- **Critical Thinking, Problem-Solving, Leadership, Communication**

CERTIFICATIONS & SEMINARS:

AWS Certified Solutions Architect – Associate (SAA-C03): In Progress (Target: Q4 2026)

Cisco: CCNAv7, Endpoint Security, Network Defense.

Seminars: LLM/Machine Learning (2025), Into The Cloud (2025), Codebuild Pocket Edition (2025).
